

Children's Hospital, J-West Addition – Columbus, Ohio

ProjectProfile

"We believe (Parex) performs better. We have confidence in their products that's why we use them. Our company believes in quality."

Size: 30,530 sq. ft.

Distributor: Reitter Supply Company

Applicator: Reitter Stucco Incorporated

Reitter Stucco and Supply is a fourth generation contractor and supplier specializing in stucco, manufactured stone, and EIFS products. The company has been servicing the Central Ohio market since 1915 and is considered an industry leader in the marketplace.

Reitter was challenged with building scaffolding over top of an existing metal roof that could not support the structure. The project required that they cut through the wall and set "I" beams on the concrete floor to support the scaffold. The scaffolding was then built on the I beams fifty feet up. Reitter also had to use a stucco pump for the application from the fourth floor of the project, with the challenging of using bagged sand. All this combined with winter weather protection is always a test for any contractor, as eighty percent of the job was completed in the winter. The job was completely covered with reinforced visqueen and heated with natural gas.

Reitter's familiarity of the products, performance and application of Parex were key in their success. "We believe (Parex) performs better," said Bobby Reitter. We have confidence in their products that's why we use them. Our company believes in quality."

The Challenge

- Scaffolding difficulties
- Pumping stucco from 50 ft.
- Winter application

The Solution

- Parex Fiber 47
- Parex 310 Primer
- Parex Sandstone
